

# *Wheatstone Bridge*

You must design a LED Wheatstone Bridge that consist of four resistors and a Red LED. This LED bridge should be a couple of inches in size, as it will be worn by you during initiation week. The resistors must be colored according to the diagram below. The LED bridge must be a circuit of your own design, and must have a unique way to light the LED bridge. Also, you must incorporate a switch so you can turn the LED bridge on and off.
