μP Laboratory 4:
Soda Pop Machine Controller

**Purpose:**
1. Develop an application using a micro-controller.

**Preparation:**
Design a vending machine control system for the given specifications.
- Use the M68HC11EVB.
- The vending machine dispenses: 4 varieties of soda pop: Coke, Diet Coke, Sprite, and Mello Yello.
- The coin entry mechanism accepts nickels, dimes, quarters, and dollar bills. The coin return mechanism gives only nickels, and dimes. Coin mechanisms produce or require positive level pulses on each coin.
- Display the amount entered or credit in the form: $0.00.

**Design Rules:**
1. Use proper documentation when creating your source file.

**Experiment Procedure:**
1. Test your vending machine controller.
Things to Consider

- **Inputs?**
  - How to input?
  - Requires positive level pulse on each coin.
  - Coin Entry Mechanism (nickels, dimes, quarters, dollar bills) (4 bits)
  - Soda Selection (4 bits)

- **Outputs?**
  - Output a pulse for each output (about ½ - 1 second pulsewidth)
  - Coin Return Mechanism (nickel, dime) (2 bits)
  - Soda Output (Coke, Diet Coke, Sprite, Mello Yello) (4 bits)
  - Amount entered or credit in the form: $0.00,(???)
